-------------------	--

Additional Backup Information

In 2012, Austin voters approved a new Montopolis Recreation and Community Center as part of Propositions # 14 for Parks and Recreation Department and # 17 for the Health and Human Services Department. The Montopolis community is a multicultural and bilingual community in East Austin. The Montopolis Recreation and Community Center has been an integral part of the community for more than 40 years. The purpose of this project is to provide a newly improved recreation and community center to the residents of the Montopolis neighborhood and citizens of Austin, while incorporating the historical and cultural values into the new building's design. The swimming pool and ballfield will be preserved as part of the park services. The playground location will be reviewed during design phase and may be relocated on the site. The new building will house services such as after-school activities, youth sport and specialized classes, education programs, exercise and fitness classes, health, wellness and nutrition programs, senior activities, neighborhood center services, seasonal service and other health services for preventative care.

The Architectural/Engineering consulting services for all phases of the project includes:

- Review of the building program and previous site studies;
- Design phase services;
- Bid phase services;
- Construction phase services, and
- Post-construction and warranty phase services.

During the design phase, City staff met with Austin Energy to explore ways to improve the sustainability of the Montopolis Recreation and Community Center (Center) that would fit within the current project budget. The project is pursuing a higher Leadership in Energy and Environmental Design certification of Gold for which energy performance is a major component. Austin Energy donated 50 photovoltaic panels to the project. The Center's estimated annual electrical consumption is \$50,000, and the new photovoltaic system will save the City \$5,000 - \$10,000 per year. The system will pay for itself in less than 9 years with an expected life span of at least 20 years. This request includes additional design services to provide a fully functional photovoltaic system that is integrated with the building's electrical systems. This request also includes additional landscape design services. These services are to document the scope of construction improvements included in a Right-of-Way license agreement. The license agreement is part of the site plan development permit requirements.

This request includes design and construction phase services.

This amendment has been approved by the City's Change Control Committee. The Change Control Committee was established to comply with Council Resolution No. 20120126-048, which required the establishment of consistent criteria and process to evaluate contractual changes for all contracts administered by the Capital Contracting Office. The Change Control Committee is comprised of management-level subject matter experts.

McKinney Architects Inc. dba McKinney York Architects is located in Austin, TX.
